

After Your Carpet Is Cleaned

- Hard surface floors can be slippery when you walk on them after crossing damp carpet. Please use caution!
- Keep children and pets off carpet for at least six hours after cleaning.
- If furniture was moved, wait 24 hours after cleaning before removing the foil tabs and Styrofoam blocks from under furniture.
- Carpets can be vacuumed 24 hours after cleaning.

Your Carpet Needs Protection After Cleaning

Regular foot traffic removes much of the manufacturer's protection from your carpet. Leaving it unprotected can cause permanent stains, premature wear, and a poor appearance.

Applying DuPont™ Teflon® carpet protection after cleaning will:

- Help in resisting traffic area damage
- Prevent most permanent stains
- Make future cleanings more effective

Ernie's Carpet Care uses only the highest quality carpet protector and a dedicated applicator. We mix and apply the protector at the proper rate and groom it into the carpet for better penetration.

Having DuPont™ Teflon® applied after cleaning will save you money on professional spot cleaning services. Carpet protector will help the dry soil slide off the carpet easier when vacuumed. Spots will be easier to remove and your carpets will look better and last longer.
